

REX JAMES

Custom Milling

REX JAMES CUSTOM DAIRY MIX

At Rex James Stockfeed we are able to custom design a ration to suit your feeding requirements. We use a range of high quality cereal grains, protein meals and legumes, a wide range of high quality vitamin and mineral premixes, plus an extensive range of feed additives to support production and animal health.

Through an on-farm consultation we can determine the needs of your herd and provide you with a custom mixed ration. With a Rex James Custom Dairy Mix you will always know what is in your feed, as with every load we provide our farmers with an ingredient inclusion list. We know how important feed quality is and how each component of the feed contributes to production, so we believe knowing what is in your feed is crucial.

We also work in with a number of consultant nutritionists and offer our customers who use external nutrition services the opportunity to supply their own minerals for inclusion in our custom feeds.

Rex James CUSTOM PROTEIN MIX

For customers who are milling their own grain and wanting to add to this, then a Rex James Custom Protein Mix is a great option. With a custom protein mix we have the ability to blend protein meals, legumes, cereal grain i.e. corn, vitamin and mineral premixes, macro minerals and quality feed additives as appropriate. The ration remains completely customisable and can be altered as the feeding situation or herd requirements change.

Rex James CUSTOM MINERAL MIX

For customers with multiple silos who see a benefit in having individual feed components we can custom build a mineral supplement to include macro and micro minerals, vitamins and feed additives as appropriate. Through consultation we can establish your herd's requirements and ensure your cows are supplied with the nutrients they need.

As with all of our mixes a Custom Mineral Mix can be altered with fluctuating herd requirements or changing feed components.

Available in; 25kg bags, Bulka Bags and Bulk (4 Tonne min)

For more information about your feed requirements please contact a Rex James Stockfeed ruminant nutrition specialist.
