

Rex James Leed Feed

Rex James Leed Feed is specifically formulated feed for transition cows and heifers (pregnant cows or heifers three weeks prior to calving date). It contains a palatable blend of nutritious cereal grains, legumes, protein meal, Rumensin[®], yeast metabolic (Diamond V XPC[®]) and a specifically designed mineral and vitamin premix in a pellet form including anionic salts.

Crude Protein	Min 16%
MJ ME/ kg DM	Min 11MJ
Crude Fibre	18%
Calcium	<u>0.7%</u>
Phosphorus	<u>0.43%</u>
Magnesium	<u>1.2%</u>
DCAD (mEq/kg)	<u>-1092</u>
Monensin (mg/kg)	<u>200</u>

*Typical analysis at 89% dry matter

Leed Feeding facilitates a smooth transition through calving to lactation allowing the rumen to adapt to a high grain diet prior to the commencement of lactation.

Our premix is in a pellet form to allow the bitterness of the vitamins, minerals and anionic salts to be disguised by the flavouring used. This will increase palatability and also encourage even distribution and uptake to prevent metabolic diseases that are common throughout the transition period.

Benefits;

- A Rumen Buffer has been included to reduce the risk of digestive upsets.
- Diamond V yeast metabolite has been included to improve rumen efficiency.
- A feed flavour is present to increase palatability.
- Balanced mineral profile, and low DCAD to balance the transition diet.
- Includes added organic chromium to increase insulin sensitivity.
- Rumensin[®] is included

Rex James Leed Feed

Directions of use;

It has been shown that forage sources vary significantly in their DCAD levels which will affect the success of your transition program. To ensure the maximum success of your transition program it is advisable to test the forage sources of the ration to establish an appropriate Leed feed rate.

As a general guide feeding between 3-4 Kg of Rex James Leed Feed will give satisfactory results in most transition diets.

Benefits

The benefits of Leed feeding include; reduced clinical and subclinical milk fever incidences, reduced retained foetal membranes and assisted calving, reduced acidosis, ketosis and lameness in fresh cows, increased conception rates and increased milk production. Leed Feeding also has a positive effect on colostrum quality and calf health.

Sizes

25Kg bags, Bulka Bags and Bulk

Withholding periods;

Meat: Cattle— Nil

Milk: Cattle —Nil

Contraindications;

Dogs, horses and other equines **must not** be allowed access to this feed, as ingestion may be fatal. **DO NOT** feed to lactating cows or cattle treated with Rumensin anti-bloat capsules within the previous 100 days. ®
